Document Number : CHD 17 (28221) WC

Title of the document : Leather Board for Footwear Insole Specification First Revision

Document Type : Revision of Indian Standard (IS 5867 : 1970)

This document has following salient features which may require specific attention for your valuable comments:

- 1) This standard prescribes the requirements and the methods of sampling and tests for leather boards for footwear insoles. Boards containing only cellulose fibre, sometimes known in the trade as leather boards are not part of this standard.*
- 2) Leather board is a type of fibrous board having tanned or untanned leather or collagen fibre as its constituent. Its application is diverse but used mainly by footwear, leather goods, and travel goods industries. The leather board as a footwear component should be of an appropriate grade and quality, which has to render desired functional properties to the wearer, provided the footwear is correctly designed and constructed. Conversely, it should have adequate constituents or substances to meet the requirement. The leather board generally is more economical than leather.*
