Draft Indian Standard

**Photography — Rolls of sensitized material for the pre-press
industry — Dimensions and related requirements**

(First Revision of IS 12533)

ICS 37.040.20

Electroplating Chemicals and Photographic
Materials Sectional Committee, CHD 5

Last Date for Comments: 02 November 2025

NATIONAL FOREWORD

(formal clauses to be added later)

This standard was first published in 1988 by taking considerable assistance from ISO/DIS 6408 'Photography — Papers in rolls for phototypesetting and photolettering devices — Dimensions and labelling'. Considering the benefits of aligning standard with that of international standards, the Committee responsible for formulation of this standard has decided to revise it by the identical adoption of ISO 3772 : 2000 'Photography — Rolls of sensitized material for the pre-press industry — Dimensions and related requirements' under dual numbering.

This Standard specifies the dimensions of sensitized materials, cores and disposable cassettes, and describes package marking for sensitized materials, including those for electronic scanners or image-setting devices and those materials supplied in disposable cassettes.

The text of ISO Standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions and terminologies are, however, not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- a) Wherever the words 'International Standard' appear referring to this standard, they should be read as 'Indian Standard'; and
- b) Comma (,) has been used as a decimal marker, while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

The Committee has reviewed the provisions of the following International Standard referred in this adopted standard and has decided that it is acceptable for use in conjunction with this standard:

<i>International Standard</i>	<i>Title</i>
ISO 1:1975	Standard reference temperature for industrial length measurements
ISO 554:1976	Standard atmospheres for conditioning and/or testing — Specifications

In this adopted standard, reference appears to certain International Standards where the standard atmospheric conditions to be observed are stipulated which are not applicable to tropical/subtropical countries. The applicable standard atmospheric conditions for Indian conditions are $(27 \pm 2) ^\circ\text{C}$ and (65 ± 5) percent relative humidity and shall be observed while using this standard.

In reporting the result of a test or analysis made in accordance with this standard, if the final value, observed or calculated, is to be rounded off, it shall be done in accordance with IS 2 : 2022 'Rules for rounding off numerical values (*second revision*)'.

'FOR COMPLETE TEXT OF THE DOCUMENT, KINDLY REFER ISO 3772 : 2000
