Last Date for Comments: 4th September 2024.

Leather, Tanning Materials and Allied Products, Sectional Committee CHD 17

NATIONAL FOREWORD

(Formal clause will be added later)

This standard was first published in 1997 and was technically equivalent with ISO 11646:1993. 'Leather — Measurement of area'. The Committee responsible for formulating this standard has decided to revise the standard and harmonize the standard with latest ISO 11646:2014.

This standard specifies a method of measuring the area of pieces of leather. It is intended only for the measurement of dressed and other dry flexible leathers.

The text of ISO Standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions are however not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- Wherever the words 'International Standard' appear referring to this standard, they should be read as 'Indian Standard'.
- Comma (,) has been used as a decimal marker while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

In this adopted standard, reference appears to certain International Standards for which Indian Standards also exist. The corresponding Indian Standards, which are to be substituted in their respective places, are listed below along with their degree of equivalence for the editions indicated:

<i>International Standard</i>	<i>Corresponding Indian Standard</i>	<i>Degree of Equivalence</i>
ISO 2419 Leather — Physical and mechanical tests — Sample preparation and conditioning	Doc No CHD/17/ 26062 IS 5868 (Part 3) : 20XX Leather — Method of Sampling Part 3 — Sampling preparation and conditioning for physical and mechanical test	Identical with ISO 2419 : 2012

In this adopted standard, reference appears to certain International Standards where the standard atmospheric conditions to be observed are stipulated which are not applicable to tropical/subtropical countries. The applicable standard atmospheric conditions for Indian conditions are $27\text{ }^{\circ}\text{C} \pm 2\text{ }^{\circ}\text{C}$ and (65 ± 5) percent, relative humidity and shall be observed while using this standard.

In reporting the result of a test or analysis made in accordance with this standard, if the final value, observed or calculated, is to be rounded off, it shall be done in accordance with IS 2: 2022 'Rules for rounding off numerical values (*second revision*)'.
