**NATIONAL FOREWORD**

(Formal clauses shall be added later)

The framework in this document provides guidance to countries and other interested parties on a consistent, comparable and transparent approach to selecting, proposing, using, revising and maintaining methodologies on climate action. These methodologies are designed to be reproducible and aim to help climate action and its ambitious goals to be achieved.

The framework supports various organizations, such as:

- Government and non-state actors, including local government, industrial associations, technical institutions, and methodology developers and users;
- Private and public organizations, environmental NGOs, and other organizations that use climate action methodologies;
- Financial institutions that support climate actions.

The text of ISO Standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions are, however, not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- a) Wherever the words 'International Standard' appears referring to this standard, they should be read as 'Indian Standard'.

- b) Comma (,) has been used as a decimal marker, while in Indian Standards, the current practice is to use a point (.) as the decimal marker.
