Draft Indian Standard

CHELATED IRON (Fe-EDTA), AGRICULTURAL GRADE - SPECIFICATION

(First Revision of IS 13922)

ICS No. 65.080

Soil Quality and Fertilizers Sectional Committee, FAD 07

Last Date of Comments: 1 July 2024

FOREWORD

(Formal clauses would be added later)

Chelated fertilizers improves the bioavailability of micronutrients such as Iron, Copper, Zinc and in turn contribute to the productivity and profitability of commercial crop production.

This standard was first published in 1994 to provide uniformity in the production of quality chelated iron (Fe-EDTA) to the users. In this revision, the limits of cadmium and arsenic along with their test methods have been incorporated to align it with Fertilizer Control Order. Also, the standard has been brought out in the latest style and format of the Indian Standards, and references to Indian Standards wherever applicable have been updated. It also incorporates one amendment issued to the previous version of this standard.

In the preparation of this standard, due consideration has been given to the provisions under *Fertilizer Control Order*, 1985. However, this standard is subject to the restrictions imposed under these, wherever applicable.

For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test or analysis, shall be rounded off in accordance with IS 2: 2022 'Rules for rounding off numerical values (second revision)'. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.

1 SCOPE

This standard prescribes the requirements and methods of sampling and test for chelated iron (Fe-EDTA), agricultural grade.

2 REFERENCES

The standards listed below contain provisions which through reference in this text, constitute provisions of this standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this standard are encouraged to investigate the possibility of applying the most recent editions of the standards listed below:

IS No.	Title	
IS 1070 : 2023	Reagent grade water – Specification (fourth revision)	
IS 5985 : 1985	Code of practice for handling and storage of bagged fertilizers	
	(first revision)	
IS 6092 (Part 1): 1985	Methods of sampling and test for fertilizers: Part 1 Sampling	
	(first revision)	
IS 6092 (Part 5): 1985	Methods of sampling and test for fertilizers: Part 5 Determination	
	of secondary elements and micronutrients (first revision)	
IS 6092 (Part 6): 1985	Methods of sampling and test for fertilizers: Part 6 Determination	
	of moisture and impurities (first revision)	

3 REQUIREMENTS

3.1 Description

This material shall be in the form of free-flowing crystalline powder.

3.2 The material shall also comply with the requirements specified in Table 1.

Table 1 Requirements for Chelated Iron (Fe-EDTA), Agricultural Grade (*Clauses* 3.2)

Sl No.	Characteristic	Requirement	Method of test (Ref to)
(1)	(2)	(3)	(4)
i)	Iron content (expressed as Fe), percent	12.0	Annex A
	by mass, <i>Min</i> in the form of Fe-EDTA		
ii)	Lead (as Pb), percent by mass, Max	0.003	IS 6092 (Part 5)
iii)	рН	5.5 - 6.5	Annex B
iv)	Cadmium (as Cd), percent by mass, Max	0.0025	Annex C
v)	Arsenic (as As), percent by mass, Max	0.01	IS 6092 (Part 6)

4 PACKING

4.1 The packing should be capable of providing adequate protection to the contents from absorption of moisture by the use of inner plastics liner. Further, the packing should by physically strong enough to withstand the normal stresses of handling in stacking, transport and storage.

4.2 It is recommended that the material is packed in 100 g to 500 g packings or as agreed to between the purchaser and the supplier.

5 MARKING

- **5.1** The packing shall be securely closed and marked with the following information:
 - a) Name of the fertilizer;
 - b) Indication of source of manufacture;
 - c) Percentage of iron by mass;
 - d) Gross and net quantity in kg;
 - e) Batch number, in code or otherwise, to enable the lot of manufacture to be traced back from records;
 - f) Month and year of packing; and
 - g) Any other requirements as specified under the *Fertilizer Control Order*, 1985 and the *Legal Metrology (Packaged Commodities) Rules*, 2011.

5.2 BIS Certification Marking

The product(s) conforming to the requirements of this standard may be certified as per the conformity assessment schemes under the provisions of the *Bureau of Indian Standards Act*, 2016 and the Rules and Regulations framed thereunder, and the products may be marked with the Standard Mark.

6 HANDLING AND STORAGE

Factors to be borne in view in the handling and storage of the material shall be as prescribed in IS 5985.

7 SAMPLING

7.1 The method for drawing representative samples of the material shall be as prescribed in IS 6092 (Part 1).

7.2 Number of Tests

- **7.2.1** Iron content shall be tested on each of the individual samples. The lot shall be considered to have satisfied the requirement for iron, if test results on each of the individual samples meet the corresponding requirement given in Table 1.
- **7.2.2** The remaining characteristics given in Table 1 shall be tested on the composite sample. The lot shall be considered to have met the remaining requirements given in Table 1 if each of the test results on the composite sample satisfies the corresponding requirement given in Table
- **7.2.3** The lot shall be declared as conforming to the requirements of the specification if **7.2.1** and **7.2.2** are satisfied.

8 TESTS METHODS

Tests shall be carried out by the appropriate methods in col (4) of Table 1.

9 QUALITY OF REAGENTS

Unless specified otherwise, pure chemicals and distilled water (see IS 1070) shall be employed in tests.

NOTE - 'Pure chemicals' shall mean chemicals that do not contain impurities which affect the result of analysis.

ANNEX A

[*Table* 1, *Sl No.* (i)]

DETERMINATION OF CHELATED IRON

A-1 REAGENTS

A-1.1 Sodium Hydroxide Solution – 0.5 N.

Dissolve 20 g sodium hydroxide (NaOH) in water and dilute to 1 litre.

A-1.2 Disodium EDTA Solution – 0.66 percent

Dissolve 0.73 g of Na₂H₂ EDTA.2H₂O in water, dilute to 100 ml.

A-1.3 Iron Standard Solution

A-1.3.1 *Stock Solution -* (1 000 ppm)

Dissolve 1.000 g pure iron wire in approximately 30 ml 6N HCl with boiling. Dilute to 1 litre in a volumetric flask with distilled water.

A-1.3.2 *Intermediate Solution* – 100 ppm.

Pipette 10 ml iron stock solution and 10 ml disodium EDTA solution in 100 ml volumetric flask and dilute to volume.

A- 1.3.3 Working Solution

Pipette the following volumes 100 ppm intermediate solution in 50 ml, numbered volumetric flask and make the volume with 0.5 N HCl.

A-2 APPARATUS

Atomic absorption spectrophotometer with air/acetylene flame.

A-3 PROCEDURE

A-3.1 Preparation of Sample Solution

Weigh sample containing approximately 40 mg of iron into 200 ml, tall form beaker. Wet with 2-3 drops of alcohol and dissolve in 100 ml of water. Add 4 drops of 30 percent H₂O₂ mix and adjust *p*H of solution to 8.5 with 0.5 N NaOH. If *p*H drifts above 8.8 discard solution and repeat analysis. Transfer solution to 200 ml volumetric flask, dilute to volume with water and mix. Filter solution through quantitative paper. Pipette 10 ml filtrate into 200 ml volumetric flask and dilute to volume with 0.5 N HCl.

A.3.2 Flaming the Solution

Flame the standard and the sample solution in atomic absorption spectrophotometer at a wave length of 248.3 nm using air acetylene flame. In same manner, determine iron (Fe) blank on all reagents used.

Flask No.	Volume of 100 ppm standard iron solution taken (ml)	Concentration of Fe after making volume to 50 ml (ppm)
1	1.0	2.0
2	2.0	4.0
3	3.0	6.0

4	4.0	8.0
5	5.0	10.0
6	6.0	12.0
7	7.0	14.0
8	8.0	16.0
9	9.0	18.0
10	10.0	20.0

A-4 CALCULATION

Prepare a standard curve of known concentration of Fe solution by plotting the absorbance value on Y-axis against the respective Fe concentration on X-axis.

Chelated iron, percent by mass = $\frac{(ppm \ Fe \ in \ sample - ppm \ Fe \ in \ blank) \times 0.4}{mass \ in \ g \ of \ sample \ taken}$

ANNEX B [Table 1, Sl No. (iii)] DETERMINATION OF pH

B-I PROCEDURE

Dissolve 5 g of the material in freshly boiled and cooled water, dilute to 100 ml and mix. Determine the pH value of the solution with a pH meter .

ANNEX C [Table 1, Sl No. (iv)] DETERMINATION OF CADMIUM

C-1 REAGENTS

C-1.1 Standard Cadmium Solution

Weigh out 1 g of pure cadmium metal and transfer it to a 250 ml beaker. Add 50 ml of water and 10 ml of concentrated nitric acid to dissolve the metal completely. Transfer the cadmium solution to a one litre flask with necessary washing. Make up the volume up to the mark. Shake well. This is a 1000 ppm solution of cadmium, (hereinafter called standard A). Dilute 1 ml of standard A to 100 ml in a volumetric flask. This is a 10 ppm solution of cadmium, (hereinafter called standard B).

C-1.2 Glass distilled water of pH 2.5 + 0.5

Dilute 1 ml of 10 percent sulphuric acid to one litre with glass distilled water and adjust the pH to 2.5 + 0.5 with a pH meter using sulphuric acid or sodium hydroxide solution. The water so obtained is called acidified water.

C-2 PREPARATION OF WORKING STANDARDS

Pipette out the following volume of standard B in 100 ml of numbered volumetric flask and make up the volume with acidified water. Stopper the flask and shake them well. The same acidified water should be used for the preparation of the sample solution. Fresh standards should be prepared and used every time.

Flask No.	Volume of standard (B) taken in ml	Concentration of cadmium after making volume to 100 ml (in ppm)
1	0	0.0
2	2.0	0.2
3	4.0	0.4
4	8.0	0.8
5	12.0	1.2
6	16.0	1.6
7	20.0	2.0

C-3 PROCEDURE

C-3.1 Preparation of Sample Solution

Weigh 2 g of chelated iron and transfer it to a 100 ml volumetric flask giving repeated washings with acidified water. Dissolve the material by shaking well, make up the volume and mix thoroughly. Filter a portion if necessary. For higher concentration of cadmium adjust the weight and dilution such that the absorbance of final flaming solution is not more than a 2 ppm solution of cadmium.

Aspirate the standards as well as the sample solution in an atomic absorption Spectrophotometer at a wave length of 228.8 nm using air acetylene flame and note the corresponding absorbance value for each solution.

C-4 CALCULATION

Draw a graph using concentration (ppm) as the X-axis and absorbance as the Y-axis. Determine the concentration of cadmium in ppm in the sample solution from the graph.

Cadmium (as Cd), concentration in ppm =
$$\frac{C \times F}{M}$$

where.

C = concentration in ppm of final sample solution

M = mass of the sample

F = the dilution factor.
