NATIONAL FOREWORD

(Formal clauses will be added later)

This Draft Indian Standard (Part 1) which is identical with ISO/IEC 21823-1:2019 ‘Internet of things (IoT) Interoperability for IoT systems Part 1: Framework’ issued by the International Organization for Standardization (ISO) and International Electrotechnical Commission (IEC) *will be* adopted by the Bureau of Indian Standards on the recommendation of the Internet of Things and & Digital Twin Sectional Committee (LITD 27) and approval of the Electronics and Information Technology Division Council.

This standard (Part 1) is one of the parts of a series of standards on ‘Internet of Things (IoT) Interoperability for IoT Systems’. The other parts in this series are:

Part 2: Transport interoperability

Part 3: Semantic interoperability

Part 4: Syntactic interoperability

The text of ISO/IEC Standard *may be* approved as suitable for publication as an Indian Standard without deviations. Certain conventions are however not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- a) Wherever the words ‘International Standard’ appears referring to this standard, they should be read as ‘Indian Standard’.
- b) Comma (,) has been used as a decimal marker while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

The technical committee has reviewed the provisions of the following International Standards referred in this adopted standard and has decided that they are acceptable for use in conjunction with this standard. For undated references, the latest edition of the referenced document applies, including any corrigenda and amendment. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies:

International standards	Title
ISO/IEC 30141	Internet of Things (IoT) – Reference architecture

For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test or analysis, shall be rounded off in accordance with IS 2:2022 ‘Rules for rounding off numerical values (*Second Revision*)’. The number of significant places retained in the rounded off value should be same as that of the specified value in this standard.

SCOPE OF ISO/IEC 21823-1:2019

“This document provides an overview of interoperability as it applies to IoT systems and a framework for interoperability for IoT systems. This document enables IoT systems to be built in such a way that the entities of the IoT system are able to exchange information and mutually use the information in an efficient way. This document enables peer-to-peer interoperability between separate IoT systems.

This document ensures that all parties involved in building and using IoT systems have a common understanding of interoperability as it applies to IoT systems and the various entities within them.”

Note: - The Technical content of this document has not been enclosed as these are identical with the corresponding ISO/IEC Standard. For details please refer to ISO/IEC 21823-1:2019 or kindly contact.
