NATIONAL FOREWORD

This draft Indian Standard which is identical with ISO 3569:1976 ‘Continuous mechanical handling equipment — Classification of unit loads’ issued by International Organization for Standardization (ISO), will be adopted by the Bureau of Indian Standards on the recommendations of Transport Packages, Packaging Codes and Pallets Sectional Committee and approval of the Transport Engineering Division Council.

This standard was first published in 1976. This revision of this standard is undertaken to align it with the latest version of ISO 3569: 1976. The title of IS 8005 has also been aligned with ISO 3569: 1976.

The text of ISO standard is proposed for publication as an Indian Standard without deviations. Certain terminologies and conventions are, however, not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- a) Wherever the words ‘International Standard’ appear referring to this standard, they should be read as ‘Indian Standard’.
- b) Comma (,) has been used as a decimal marker, while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

Attention is drawn to the possibility that some of the elements of this standard may be the subject of patent rights. The Bureau of Indian Standards shall not be held responsible for identifying any or all such patent rights.

SCOPE

This International Standard establishes the classification and symbolization of unit loads for continuous mechanical handling. These loads are classified according to their shape, mass, volume, material, base area, physical and chemical properties, sensitivity and other influences.
