The following document has been prepared by the Electrical Insulators And Accessories Sectional Committee, ETD 06. Please [click here](#) to view the document.

Document Number : ETD 06 (17554) WC

Title of the document : Insulators for overhead lines with a nominal voltage above 1 000 V - Ceramic insulators for ac systems - Characteristics of insulator units of the long rod type

Document Type : New Indian Standard

This document has following salient features which may require specific attention for your valuable comments:

1) *This standard is applicable to string insulator units of the long rod type with insulating parts of ceramic material intended for use in AC overhead power lines with a nominal voltage greater than 1000 V and a frequency not greater than 100 Hz. It is also applicable to insulators of similar design, used in substations. It is applicable to ceramic string insulator units of the long rod type, either with a clevis end fitting at both ends for coupling with a tongue, or with a socket end fitting at both ends for coupling with a pin ball. The object of this standard is to prescribe specified values for electrical and mechanical characteristics, and for the principal dimensions of ceramic string insulator units of the long rod type.*

Please examine the document and share your comments regarding further improvement in the document.
