Indian Standard
**SPECIFICATION FOR
EDISON SCREW LAMPHOLDERS**

PART I REQUIREMENTS AND TESTS

1. SCOPE

1.1 This standard (Part I) specifies the requirements and tests for lampholders with edison thread E14, E27 and E40, designed for connection of lamps only to the supply.

1.2 As far as it reasonably applies, the specification also covers lampholders which are, wholly or partly, integral with a luminaire or intended to be built-in into appliances. Independent lampholders, that is, backplate lampholders, not specifically intended for building-in, are also tested as luminaries.
