

# SYNOPSIS

**ETD 28(12078)**  
**IS 14286 (Part 1/Sec 1) : 2018**

## **TERRESTRIAL PHOTOVOLTAIC (PV) MODULES – DESIGN QUALIFICATION AND TYPE APPROVAL – Part 1-1: Special requirements for testing of crystalline silicon photovoltaic (PV) modules**

This part of IS 14286 lays down requirements for the design qualification and type approval of terrestrial photovoltaic modules suitable for long-term operation in general open air climates, as defined in IEC 60721-2-1. This standard is intended to apply to all crystalline silicon terrestrial flat plate modules.

The object of this test sequence is to determine the electrical and thermal characteristics of the module and to show, as far as possible within reasonable constraints of cost and time, that the module is capable of withstanding prolonged exposure in climates described in the scope. The actual lifetime expectancy of modules so qualified will depend on their design, their environment and the conditions under which they are operated.

This standard defines PV technology dependent modifications to the testing procedures and requirements as per IS 14286 (Part 1) and IS 14286(Part 2).
