*Indian Standard*

**SPECIFICATION FOR  
HOT APPLIED SEALING COMPOUNDS FOR  
JOINTS IN CONCRETE**

*( First Revision )*

**1. SCOPE**

**1.1** This standard specifies hot applied sealing compounds intended for use in sealing joints in concrete roads, runways, bridges and other structures.

**1.2** The material covered by this standard is suitable only for longitudinal and transverse joints not more than 12 m apart and where the effect of the breakdowns of the seal is unlikely to be serious and the need to reseal at more frequent intervals is unlikely to cause serious inconvenience to the users and the use of a more expensive high extension type sealant is not justified.
