*Indian Standard*

**CODE OF PRACTICE FOR DESIGN,  
CONSTRUCTION AND MAINTENANCE OF  
RELIEF WELLS**

*( First Revision )*

**1 SCOPE**

**1.1** This standard covers design, construction, observation and maintenance of relief wells provided for earth dams resting on pervious soil foundations. The principles, however, may also be applied to other structures ( such as spillway aprons, head regulators and other appurtenant structures ) involving pervious foundations, where uplift pressures are likely to develop.
