SYNOPSIS

Doc: MHD 17(13241) IS/ISO 10159:2011 Health informatics — Messages and communication — Web access reference manifest

a) Scope:

This Standard specifies the format of a manifest of web access reference pointers, information object identifiers, information object filenames and associated information required by a target IT system. This enables local web access to the referenced information objects when a package containing the referencing document, the manifest and the objects (stored in files) is sent from a source clinical domain to a target clinical domain in which the server references are different from those in the source clinical domain.

b) Salient Features of content

The following topics are outside the scope of this Standard:

- technologies used for data storage and communication;
- support for the traceability of the transformation of the URI references from source to target in the case of sending of files received by a target IT system to another clinical domain.

c) Type/grades/classes, if any covered in the standard: Nil.

d) Disclaimer (to be automatically provided by the program/ software)
